

Catch the Rising Star of Winter Overseeding

Poa trivialis has become the clear choice of discerning turf managers for overseeding dormant bermudagrass greens and fairways. The market has been demanding darker green, more disease resistant Poa trivis than has been available in the past. TMI has spent years developing StarDust to be one of the darkest commercial Poa trivis for better color matches with some of today's

darkest green ryegrasses such as Evening Shade, Black Hawk and Laredo. University overseeding trials in Florida and Arizona have shown StarDust is setting the next standard that other Poa trivis can only hope to achieve!
